

High Density Storage Solutions that Save Space, Time and Resources - All in a Secure Environment

Nordplan USA brings more than 40 years of continuous product development with an innovative high density storage system that keeps all your vital information at your fingertips.

Nordplan integrates form and function to provide not just a storage system, but what is becoming a fusion of stylish design and cutting edge technology. This high density storage system keeps all of your vital information secure and ready when you need it. Several environment-related features -- such as electronic control, air circulation, lighting, security, and safety -- allow installation in virtually any location for a variety of organizational needs.

Condense, Control and Safe-Keep Information and Items

Nordplan USA offers a range of storage and filing products that include stationary shelving as well as computerized, mechanical, and manual mobile systems; the mobile carriages run on easy-glide rails which are surface-mounted or embedded in the floor.

Nordplan's Computerized mobile system is the ultimate in high-density filing and storage; with the simple touch of a button, carriages can be moved to the desired location no matter the size or weight.

Benefits of a High Density Storage System Include:

- **Storage Capacity:** On average, storage capacity is more than doubled with the use of a High Density Mobile Storage System, freeing up valuable floor space.
- **Work Efficiency:** With all media stored in a central location, there's no wasted time when retrieving information from various locations throughout the office; keeping track of important media is simple and locating it is as easy as 1-2-3.
- **Flexibility:** Modular design allows for infinite customization, which provides individual, user-specific solutions with the added bonus that systems can easily be reconfigured or relocated as needs evolve.
- **Security:** A combination of accessories -- such as doors, panels and locks -- can be used to secure media; a feature unique to Nordplan's Computerized System are the different access codes that can be programmed into each controller, which grants access to select or all media stored only to the individuals possessing the programmed code(s) -- these features make Nordplan's systems HIPPA compliant
- **Safety:** Features such as anti-tip rails, ergonomically correct handles (in the Mechanical and Manual systems), and infra-red carriage beams (in the Computerized system), make Nordplan Mobile Storage Systems safe and reliable for all users in any environment. The systems also offer the options of ADA ramps and individual aisle lighting which automatically turn on when an aisle is opened and off when the aisle closes.
