IMAGINE IT ... A Network Infrastructure Management Solution That Can Help Improve Business Resilience, Lower Operating Costs and Boost Productivity ... Right on Your Desktop!

ViewPort™

Future Tech delivers this and more with ViewPort™ Suite. Designed to streamline your processes, improve efficiency, save money, and remain competitive in an ever-changing marketplace, ViewPort offers several options that complement your enterprise-wide needs.

ViewPort™ DMS

ViewPort™ DMS is our Desktop Management System that centralizes and controls all your IT assets from one desktop icon, including:

- Asset discovery and management
- Software distribution
- Patch management
- Virus protection
- Online backup
- Remote access 24/7/365
- Custom queries
- Performance and trend analysis
- Chart Service Levels

ViewPort™ PIMM™

ViewPort™ PIMM™ is our award-winning software solution that manages operational resources in a cost-effective environment. PIMM (Personal Information Management Monitor) is platform agnostic, using open source probes for data collection; it strategically manages any resource with a digital sensor: servers, software, databases, applications and non-IT operational resources across the enterprise.

- Console access to IT resources across multiple platforms, departments, and locations
- Proactively detects and alerts on issues on key metrics affecting the availability servers and system issues before they affect service across the entire infrastructure
- Expedites problem-solving by enabling IT staff to rapidly determine if an issue is the result of the hardware, database, applications, operating system or the underlying IT infrastructure
- Bridge the gap between 24x7 users and 8am – 6pm IT staff
- Tracks and reports usage over time enabling you to recognize usage trends, plan for updates, identify capacity requirements and better optimize resources
- Automatic software maintenance, updates and administration

ViewPort™ ARP

Our Asset Redeployment Program takes your unused and outdated equipment and returns it to action. Send your hardware to our configuration center and we'll clean it, update it, upgrade it, and return it to you so you can continue to take advantage of your valuable IT assets. We also offer an optional recycling program for assets that cannot be redeployed.

ViewPort Suite

ViewPort™ PrintFleet

PrintFleet helps control printing costs with accurate, up-to-the-minute meter reads that are accessible 24/7/365 – pinpointing which printers are swallowing financial resources.

- 64% of end-users found that a click-charge or cost-per-copy programs save them significant money
- Web-based remote monitoring provides detailed usage by device per day, month, week or year
- IT provides for technology refreshing and upgrades
- Automatic alerts for repairs, service and supply re-ordering
- Vendor-neutral – can be used with any hardware in any enterprise with networked color and monochrome printers, anywhere in N.A.

ViewPort™ MMS

ViewPort™ MMS is our Merchandise Management System developed for one of the nation's largest wine distributors yet it's customizable to virtually any industry that faces compliance issues. ViewPort MMS allows users across any sized organization to track in real-time those activities that fall under heavy restrictions, including health care, food service, alcohol, and others.

- Access information quickly
- On-site server provides 24/7/365 monitoring for one location or several
- Ideal for inter- and intra-state commerce activities
- Perform system-wide queries
- Status alerts and performance reports auto generated

ViewPort™ ContractOne

Proactively manage the IT assets and resources in your business environment – from the planning stages right through the end of the lifecycle. ContractOne delivers exceptional value and rapid ROI while greatly improving visibility and control of your projects. By quickly accessing information from a centralized repository, you'll stay in full control of your IT asset and resource obligations that include renewal dates, events, commitments, budgetary forecasts, availability and productivity. It's secure, easy-to-use and ensures improved operational efficiencies and greatly reduced administration costs.

- Proactively manage the IT assets and resources in your business environment through the entire lifecycle of the asset or project
- Stay in full control of your resource obligations including renewal dates, events, commitments, budgetary forecasts, availability and productivity
- Access information fast and reliably with a centralized repository of data
- Automated contract management feature delivers a 3-5% reduction in procurement expenses and expedites organizational efficiency
- Consolidated, repository-based system provides fingertip access to information for the procurement team and a 50-75% decrease in manual work
- Delivers exceptional value and rapid ROI while improving visibility and control
